

Dharshan Kesavan Potti
Lead Software Engineer
Email: kesavanpotti.dharshan@gmail.com
Ph #: 860-794-5745

PROFESSIONAL SUMMARY:

Lead Software Engineer with 14 years of experience designing and delivering cloud-native, scalable enterprise applications using .NET Core, C#, and Azure across distributed systems. Proven expertise in microservices, event-driven architecture, and API-first design, leveraging Azure Kubernetes Service (AKS), Service Bus, and API Management to build highly available, resilient platforms. Specializes in modernizing legacy systems (Web Forms/Classic ASP) into cloud-native architectures, driving significant improvements in scalability, reliability, and operational efficiency. Adept at implementing DevOps, CI/CD, and observability practices using Azure DevOps, GitHub Actions, Application Insights, and OpenTelemetry to accelerate release cycles and enhance system stability. Hands-on leader with strong experience in Domain-Driven Design (DDD), CQRS, Clean Architecture, and SOLID principles, building secure, high-performance systems while mentoring and leading cross-functional teams to deliver high-quality software. Additionally, experienced in developing AI-driven solutions, including intelligent validation, anomaly detection, and predictive systems that improve automation and reduce manual effort.

TECHNICAL SKILLS:

Cloud & DevOps	Azure AKS, App Service, Azure Functions, API Management, Azure SQL, Docker, Kubernetes, GitHub Actions, Azure DevOps, CI/CD
Backend & APIs	.NET 8, ASP.NET Core, Web API, Microservices Architecture, RESTful Services, gRPC, WCF, Entity Framework Core, LINQ
Frontend	React, TypeScript, JavaScript (ES6+), HTML5, CSS3, Bootstrap, RxJS
Architecture & Design	Microservices, Event-Driven Architecture, Domain-Driven Design (DDD), CQRS, Clean Architecture, SOLID Principles, Design Patterns
Data & Messaging	Azure SQL, PostgreSQL, MongoDB, SQL Server, Service Bus, Event Grid, Kafka, Redis
Observability & Performance	Azure Monitor, Application Insights, Log Analytics, OpenTelemetry, Performance Tuning, Distributed Tracing
Security & Identity	Microsoft Entra ID (Azure AD), Azure AD B2C, OAuth 2.0, OpenID Connect, JWT, Role-Based Access Control (RBAC), Zero Trust Architecture
AI & Emerging Technologies	AI-driven validation systems, anomaly detection, intelligent automation, AI integration in .NET applications.

PROFESSIONAL EXPERIENCE:

Employer: KForce Inc
Client: West Bend Mutual Insurance, West Bend, Wisconsin, USA
Sep 2026 – Present
Role: Advanced Software Engineer
Responsibilities:

- Designing and developing cloud-native services using .NET, C#, and React as part of the Agency Data Modernization (ADM) program, modernizing legacy XML-based integrations into RESTful APIs for agents and underwriters.
- Applying Domain-Driven Design (DDD) principles to model core insurance domain workflows, improving alignment between business rules and service boundaries.
- Implementing the Saga pattern to orchestrate distributed transactions across event-driven microservices, ensuring data consistency during multi-step XML-to-API modernization workflows.
- Designing asynchronous, event-driven integrations using Azure Service Bus and API Management to support reliable communication between commercial insurance systems.
- Building and maintaining CI/CD pipelines in Azure DevOps, streamlining build, test, and release processes across backend and frontend services.
- Establishing observability practices using Application Insights and OpenTelemetry to improve monitoring, troubleshooting, and production support for newly modernized services.

- Applying secure-by-design and TDD practices, writing automated unit and integration tests to maintain high code quality across the modernization effort.
- Collaborating with cross-functional teams on design reviews and technical direction, translating business requirements into scalable, maintainable service designs for the Commercial Enterprise IT team.
- Authoring automated unit and integration tests as part of a test-driven development workflow, strengthening long-term code quality.
- Translating business requirements into technical designs, contributing to architecture documentation and solution design discussions.

Employer: Compunnel Software

Client: US Bank, Brookfield, Wisconsin, USA

Oct 2025 – Aug 2026

Role: Lead Software Engineer

Responsibilities:

- Architected and delivered cloud-native applications using .NET 8, ASP.NET Core, C#, and React, building scalable REST APIs and responsive web applications on Azure.
- Designed and implemented microservices-based solutions on Azure Kubernetes Service (AKS) using Docker and Helm, improving scalability, deployment consistency, and application reliability.
- Led the modernization of legacy ASP.NET applications to .NET 8 and Azure PaaS, simplifying application management and improving scalability through cloud-native services.
- Implemented secure authentication and authorization using Microsoft Entra ID, Azure AD B2C, JWT, and role-based access control (RBAC) to meet enterprise security requirements.
- Designed event-driven integrations using Azure Service Bus and Azure API Management, enabling reliable asynchronous communication between distributed microservices.
- Built end-to-end observability using OpenTelemetry, Azure Application Insights, and Azure Log Analytics, improving monitoring, troubleshooting, and production support.
- Promoted engineering best practices by applying Domain-Driven Design (DDD), CQRS, and Clean Architecture, while leading technical discussions and delivering AI-driven proof-of-concept solutions.

Employer: Infosys Limited

Client: Northwestern Mutual, Milwaukee, Wisconsin, USA

Sep 2021 – Sep 2025

Role: Lead Software Engineer

Responsibilities:

- Delivered and led the development of cloud-native enterprise applications using .NET 8, ASP.NET Core, C#, and React, delivering scalable REST APIs and modern, responsive web applications.
- Designed and implemented microservices architecture on Azure Kubernetes Service (AKS) using Docker and Helm, improving scalability, deployment consistency, and service reliability.
- Led the modernization of 12 legacy applications from Classic ASP and Web Forms to .NET 8 on Azure PaaS, defining the migration strategy and enabling independent service deployments with minimal business disruption.
- Implemented enterprise authentication and authorization using Microsoft Entra ID, Azure AD B2C, JWT, and RBAC, following Zero Trust and secure API design principles.
- Designed an event-driven architecture using Azure Service Bus, Azure Event Grid, and Azure API Management to support reliable, asynchronous communication across distributed insurance services.
- Established DevOps and observability practices using Azure DevOps, Terraform, Bicep, OpenTelemetry, Azure Application Insights, and Log Analytics, improving deployment reliability, monitoring, and production support.
- Mentored development teams and drove engineering best practices by adopting DDD, CQRS, Clean Architecture, and SOLID principles while supporting architectural decisions across multiple projects.

Employer: Infosys Limited

Client: Northwestern Mutual, Bangalore, India

Oct 2019 – Aug 2021

Role: Lead Software Engineer

Responsibilities:

- Collaborated with business stakeholders and product owners to translate business requirements into scalable technical solutions, preparing HLDs, LLDs, and architecture proposals aligned with enterprise standards.
- Architected and developed cloud-native microservices using .NET Core, REST APIs, Azure Service Bus, and Azure Event Grid, enabling scalable and loosely coupled applications.
- Designed and implemented Azure-based solutions using App Service, API Management, Azure Functions, and AKS to improve application scalability, reliability, and cloud adoption.
- Established CI/CD pipelines using Azure DevOps and GitHub Actions, automating build, testing, and deployment processes to deliver consistent and reliable releases.
- Designed and optimized Azure SQL databases through schema design, indexing, stored procedures, and query tuning to improve application and reporting performance.
- Led front-end architecture and development using React, TypeScript, and RxJS, building reusable, responsive UI components integrated with .NET backend services.
- Mentored development teams and promoted engineering best practices by driving adoption of Clean Architecture, SOLID principles, code reviews, and technical design discussions across projects.

Employer: Infosys Limited

Client: SunTrust Bank, Mysore, India

Oct 2017 – Sep 2019

Role: Senior Software Engineer

Responsibilities:

- Participated in requirements analysis, solution design, and application development, working closely with business stakeholders in an Agile environment.
- Led the design and development of enterprise web applications using ASP.NET MVC, .NET Core, and C#, delivering scalable and maintainable solutions aligned with Clean Architecture principles.
- Modernized legacy applications from Classic ASP to ASP.NET MVC and .NET Core, improving maintainability and supporting a gradual transition to microservices.
- Developed RESTful APIs and WCF services to enable secure integration between enterprise applications and support both legacy and modern systems.
- Built responsive web applications using React, JavaScript, HTML5, CSS3, and Bootstrap, creating reusable UI components and seamless integration with backend services.
- Deployed and managed applications on Azure Kubernetes Service (AKS), leveraging Azure Monitor and Application Insights to improve application health, monitoring, and availability.
- Designed and optimized Azure SQL and MongoDB data solutions through schema design, indexing, stored procedures, and query tuning to support high-volume applications.
- Implemented CI/CD practices and automated testing with Azure DevOps and NUnit, improving release quality, deployment consistency, and overall application stability.

Employer: Infosys Limited

Client: SunTrust Bank, Mysore, India

Oct 2014 – Sep 2017

Role: Senior Software Engineer

Responsibilities:

- Partnered with product managers and business stakeholders to analyze requirements and translate them into scalable technical solutions, participating in sprint planning and Agile delivery.
- Managed user stories, sprint planning, and issue tracking using Jira, collaborating with cross-functional teams to deliver features on schedule.
- Designed and developed enterprise applications using ASP.NET MVC, C#, Web API, WCF, and N-tier architecture, building modular and reusable business components.
- Modernized legacy applications by integrating Classic ASP, WinForms, and WPF systems with REST APIs and .NET services, improving maintainability and supporting application modernization.
- Developed responsive user interfaces using Razor Views, AJAX, jQuery, HTML5, and CSS, delivering intuitive user experiences for enterprise web applications.
- Built data access layers using Entity Framework, ADO.NET, LINQ, stored procedures, and PL/SQL, optimizing data retrieval and supporting business-critical applications.
- Designed and documented REST APIs using Swagger/OpenAPI, simplifying API integration and improving collaboration between development teams.

- Established CI/CD practices using Azure DevOps and GitHub, automating build and deployment processes while supporting application deployments to Azure App Service.

Employer: Infosys Limited

Client: AmFam Insurance, Mysore, India

Jun 2012 – Sep 2014

Role: Software Engineer

Responsibilities:

- Participated in requirements analysis, solution design, development, testing, and deployment as part of the full software development lifecycle.
- Developed enterprise web applications using ASP.NET Web Forms, C#, and SQL Server, implementing business logic with a layered (N-tier) architecture.
- Built data access components using ADO.NET and SQL Server, developing stored procedures, queries, and reusable data access modules.
- Implemented role-based access control (RBAC), server-side validations, and authentication features to ensure secure and reliable application access.
- Enhanced application performance and user experience using AJAX, reusable user controls, and custom paging techniques.
- Integrated enterprise applications with external systems using ASP.NET Web Services, enabling reliable data exchange and business process integration.

EDUCATION:

Bachelor of Engineering (Computer Science) – Vinayaka Missions University, Salem, India – 2012

CERTIFICATIONS:

Microsoft Certified: Azure Developer Associate

Microsoft Certified: Azure AI Fundamentals

Microsoft Certified: Azure Fundamentals

Microsoft Certified: Programming in HTML5 with JavaScript and CSS3

Google AI Professional Certificate
