

PROFESSIONAL SUMMARY:

- **13 years** of extensive experience in all phases of Software Development Life Cycle (SDLC) with concentration in Design, Analysis, Development and implementation of various n- tiered business applications using Microsoft Technologies.
- Proficiency & expertise in Designing and Developing **Web based applications** and **development**.
- Experience in developing N-tier web applications using **Visual Studio 2017/2019/2022, C#, ASP.Net v4.5+, ASP.NET Core v8.0+, ADO.Net, WCF, WPF, Web API, XML, SOAP, VB.net, SOA Web Services (WSDL), Web Forms, Microsoft .Net Frameworks**.
- Strong experienced in **Object Oriented Programming Concept**. Worked with Design patterns like Singleton, Dependency Injection, observable.
- Led the migration of legacy systems to **Kubernetes**, significantly improving deployment speed and system reliability.
- Experience in developing applications front end using **React v13+, DOM, Node JS, HTML 5, DHTML, CSS3, Bootstrap**, JavaScript framework, Crystal report 9, MS Access, Expression (Blend and Design), **AJAX controls, jQuery, VBScript**.
- Experience with **ADO.NET data objects** such as **Datasets, Data Readers, Data Lists, and Data Adapters**.
- Extensive experience developing using **C#, ASP.NET, ADO.NET, Web Forms, Web Services, React versions, WPF, LINQ, WCF, MVC5, AJAX, Entity Framework**.
- Expert in developing **REST services** and integrating them with the Client Server Architecture. Used **Node JS** as the backend and **React** as the frontend to implement several **REST services**
- Expertise in developing and deploying custom Web parts, Workflows, Features, Site Content Types, Lists and Libraries, style sheets and site definitions using WSS, SharePoint Object Model and Visual Studio on multiple web applications.
- Experience in using **LINQ (LINQ to SQL, LINQ to XML), ADO.NET, Entity Framework 4.0/5.0/6.0** and **T-SQL** in developing **Data Access Layer**.
- Strong working experience in managing Security policies including **Authentication, Authorization, Identity, Encryption, Personalization, Membership, Roles, Profiles and Resource Access Control**.
- Professional Software developer with a strong background in the field of computer science, data science, information retrieval and document development.
- Extensive experience with development & deployment of **Web Services (WSDL), WCF services, SOA** using the **.NET Framework 3.0/3.5/4.0/4.5**.
- Familiar with JavaScript libraries like Bootstrap templates and **React.js framework**.
- Experience with **Entity Framework** approaches such as code-first and database-first.
- Experience in creating Server objects like **Tables, Stored Procedures, Views, Indexes, Triggers, Cursors, user defined data types and functions**.
- Experience in creating **T-SQL stored procedures, functions, tables, views and SQL joins** and other statements for various applications, maintained referential integrity and implemented business logic.
- Proficiency with **Object Oriented Principles**, Concepts and Best Practices.
- Worked with tools/software like TFS, Visual Studio, Developer Tool, Firebug, Visio, Fiddler, and SVN.
- Sound experience of **Agile / scrum** methodology and entire software development life cycle.

TECHNICAL SKILLS:

.NET Technologies	.NET Framework 4.8/6/8, .NET Core, ASP.NET MVC, ADO.NET, Web Services, WCF, WPF, XSLT, XSD, LINQ, UDDI, WSDL, AJAX, IIS 10/8/7, SharePoint v2010+.
Programming Languages	C, C++, C#, VB.NET, VB 6.0, SQL
Web Technologies	HTML, CSS, JavaScript, XML, ASP
Databases	MS SQL Server, Oracle, MS ACCESS
GUI / CUI / IDE	Microsoft Visual Studio 2017/2019/2022
Operating Systems	Windows Server 2016/2012/2008, Windows 10/Windows 7/Vista/ XP
Scripting	JavaScript, VB Script, jQuery, React
Development Tools	Microsoft Visual Studio 2017/2019/2022, Photoshop 2016, MS Visio, SQL Server Management Studio 2016/2014/2012/2008
Others	GIT, Team Foundation Server, GitHub, SSIS

PROFESSIONAL EXPERIENCE:

Client: US Bank, Brookfield, Wisconsin, USA

Oct 2025 – Till Date

Role: Lead .Net Developer

Responsibilities:

- Led end-to-end design and delivery of cloud-ready enterprise web applications using .NET 8 / ASP.NET Core, C#, and React (v13+) with RESTful APIs; built responsive, cross-browser UIs with Bootstrap 5 and HTML5, improving user engagement and accessibility.
- Architected and delivered scalable enterprise web platforms using ASP.NET Core (.NET 8), C#, and React 19, building high-performance RESTful APIs and responsive, accessible UIs with Bootstrap 5 and HTML5.
- Designed cloud-native microservices architectures deployed on Azure Kubernetes Service (AKS) using Docker and Helm, enabling automated orchestration, horizontal scalability, and faster release cycles.
- Modernized legacy IaaS workloads to Azure PaaS, migrating applications to Azure App Service and Azure Functions, reducing infrastructure complexity while improving elasticity, resilience, and cost efficiency.
- Implemented enterprise security and identity solutions using Microsoft Entra ID (Azure AD), Azure AD B2C, and JWT-based authentication, enforcing RBAC and IAM compliance across multi-tier applications.
- Built event-driven, asynchronous systems leveraging Azure Service Bus (queues/topics) and Azure Event Grid, improving system decoupling, throughput, and reliability under high-load scenarios.
- Developed and governed API ecosystems using ASP.NET Core Web API and Azure API Management, enabling versioning, throttling, caching, and documentation via Swagger/OpenAPI, with React clients consuming APIs through RxJS Observables.
- Applied CQRS, Domain-Driven Design (DDD), and Clean Architecture, ensuring clear separation of concerns, long-term maintainability, and independent service evolution.
- Optimized enterprise data platforms using Azure SQL and Azure Database for PostgreSQL, implementing indexing, query tuning, elastic pools, encryption, and performance optimization for high-volume workloads.
- Established CI/CD and operational excellence practices using Azure DevOps, GitHub Actions, Azure Monitor, Application Insights, Log Analytics, and OpenTelemetry, enabling automated deployments, observability, reduced MTTR, and production stability.
- Led Agile delivery and engineering governance, mentoring teams on SOLID principles, testing strategies, and performance profiling, while collaborating with product managers, offshore teams, and DBAs to align architecture with business priorities.
- Designed and developed a Proof of Concept (PoC) AI-driven application that intelligently corrected and suggested modified account and credit card numbers when users entered incorrect names or address details.
- Integrated AI-based matching logic with a relational database to perform contextual validation, fuzzy matching, and secure data retrieval.
- Improved data accuracy and reduced manual reconciliation by automating error detection and intelligent correction workflows.

Environment: C#, .Net 8, .Net Web API, ADO.Net, SQL, Azure, TypeScript, React, Node JS, HTML5, CSS3, Bootstrap, HTTP, AJAX, JSON, XML, Visual Studio, Windows, Azure SQL, GitHub Action (CI/CD), Blazor, Kendo UI

Client: Northwestern Mutual, Milwaukee, Wisconsin, USA

Sep 2021 – Sep 2025

Role: Lead .Net Developer

Responsibilities:

- Led architecture and development of scalable enterprise web applications using ASP.NET Core (.NET 8), C#, and React 19, implementing RESTful APIs and responsive UI with Bootstrap 5 and HTML5, improving cross-browser compatibility and accessibility.
- Designed and deployed microservices-based solutions on Azure Kubernetes Service (AKS), leveraging Docker containers and Helm charts for automated orchestration, achieving faster deployments and improved scalability.
- Migrated legacy IaaS workloads to Azure PaaS, transitioning applications to Azure App Service and Azure Functions, reducing infrastructure complexity and operational costs while improving elasticity.
- Implemented enterprise-grade security for multi-tier .NET applications using Microsoft Entra ID (Azure AD), Azure AD B2C, and JWT-based authentication, ensuring compliance with identity and access management standards.
- Developed event-driven, asynchronous workflows leveraging Azure Service Bus (queues/topics) and Azure Event Grid, improving system decoupling and throughput under high-load conditions.
- Built and managed robust API ecosystems using ASP.NET Core Web API, integrated with Azure API Management for versioning, throttling, and caching; documented APIs with Swagger/OpenAPI and connected React clients via RxJS Observables.
- Applied CQRS and Domain-Driven Design (DDD) principles across distributed services, enforcing Clean Architecture and separation of concerns to improve maintainability and scalability.
- Optimized relational data solutions on Azure Database for PostgreSQL, implementing indexing strategies, query tuning, and stored procedures to enhance performance for high-volume workloads.
- Automated CI/CD pipelines using Azure DevOps and GitHub Actions, enabling continuous integration, automated testing, and multi-environment deployments to AKS and App Service, reducing release cycle time.
- Established engineering best practices and led code reviews, mentoring developers on SOLID principles, unit/integration testing, and performance profiling.
- Directed Agile delivery processes (Scrum/Kanban), including sprint planning, backlog refinement, and iteration demos, ensuring alignment with stakeholders and predictable delivery velocity.
- Implemented observability and proactive monitoring using Azure Monitor, Application Insights, and Log Analytics, combined with distributed tracing via OpenTelemetry, reducing MTTR and improving system reliability.
- Developed responsive UI components with React, Bootstrap, and Font Awesome, delivering pixel-perfect UX across mobile and desktop platforms.
- Modernized enterprise application UX by collaborating with design and product teams to adopt Material Design principles and streamline workflows, improving usability and reducing support overhead.
- Redesigned UI components using MudBlazor for Blazor-based applications, delivering a consistent, responsive, and modern user experience across the platform.
- Designed and maintained Azure SQL solutions, implementing elastic pools, data encryption, and performance tuning strategies to ensure scalability and security for mission-critical applications.
- Implemented GitHub Actions for CI/CD automation, integrating build, test, and deployment workflows with GitHub for distributed version control and environment-specific configurations.
- Converted legacy ad-hoc SQL queries into standardized stored procedures, aligning batch logic with enterprise architecture standards.
- Collaborated with product managers, offshore teams, and database administrators to align batch processing with evolving business requirements.
- Served as primary on-call resource for critical batch processing issues, proactively managing risk to downstream systems and business reporting.
- Tracked, documented, and escalated recurring incidents, contributing to root cause analysis, backlog prioritization, and long-term stability improvements.
- Authored and maintained knowledge base articles and support documentation, improving incident response efficiency and reducing dependency.
- Managed and optimized batch job workflows running on Control-M, ensuring reliable execution of periodic data

management and cleansing processes.

- Used Kendo UI framework in applications and added features like Kendo grid, Kendo autocomplete, Kendo window etc.
- Developed user interface for the business users for the reporting of the data related to the incidents and issue using the Kendo UI and it's elements like Grid Controls, Chart Controls etc.
- Built an AI-driven PoC in ASP.NET Core (.NET 8) to analyze application logs, detect exceptions, and identify recurring error patterns using intelligent correlation and anomaly detection.
- Implemented threshold-based and trend-aware alerting integrated with Application Insights / ILogger, proactively notifying teams when error volumes exceeded normal baselines.

Environment: C#, .Net 8, .Net Web API, ADO.Net, SQL, Azure, TypeScript, React, Node JS, HTML5, CSS3, Bootstrap, HTTP, AJAX, JSON, XML, Visual Studio, Windows, Azure SQL, GitHub Action (CI/CD), Blazor, Kendo UI

Client: Northwestern Mutual, Bangalore, India

Oct 2019 – Aug 2021

Role: Lead .Net Developer

Responsibilities:

- Collaborated directly with business stakeholders and product owners to gather requirements for new modules and enhancements; authored and maintained comprehensive Technical Design Documents (TDD).
- Led the front-end development of a dynamic web portal using HTML5, CSS3, TypeScript, and RxJS, delivering real-time dashboards and interactive forms aligned with business requirements.
- Engineered and deployed RESTful and SOAP-based services using ASP.NET Core and C#, exposing analytics and transactional data to both internal systems and third-party clients.
- Hosted services securely on Azure App Service and Azure API Management, implementing centralized logging and performance monitoring with Azure Monitor, Application Insights, and Log Analytics.
- Designed and optimized Azure SQL Database schemas, created stored procedures, and implemented indexing strategies to improve query performance and reporting efficiency.
- Integrated .NET Core services with Azure Event Grid and Azure Service Bus, enabling a robust event-driven architecture for improved system decoupling and responsiveness.
- Orchestrated container-based deployments using Azure Kubernetes Service (AKS) and automated CI/CD pipelines via Azure DevOps, reducing deployment time by 50% and ensuring reliable release cycles.
- Implemented React reactive forms with .NET backend validation, ensuring high accessibility standards and consistent form behaviors across devices.
- Authored unit, integration, and regression test suites using NUnit and Azure DevOps Test Plans, achieving over 85% code coverage in mission-critical modules.
- Managed Agile ceremonies (daily standups, sprint planning, retrospectives) and release cycles using Azure Boards, aligning with Scrum and Kanban methodologies.
- Mentored junior developers in front-end best practices, .NET backend architecture, and Azure-native service integration across microservices.
- Developed and maintained RESTful APIs using .NET 6 with Swagger/OpenAPI integration for seamless documentation and testing.
- Built and deployed applications based on Microservices Architecture, enabling scalability, maintainability, and independent deployment of modules.

Environment: .NET 4.8/8.0, C#, React, TypeScript, NPM, Node JS, Azure, HTML5, CSS3, Bootstrap, XML, .NET Web API, HTTP, Jira, Agile, Windows, Azure SQL, Blazor

Client: SunTrust Bank, Mysore, India

Oct 2017 – Sep 2019

Role: Senior .Net Developer

Responsibilities:

- Involved in the analysis, design, development stages of the Project from the requirements gathered from the users and followed Agile Methodology.
- Major role in the development of the web application using ASP.NET MVC 5.0, C#, Java script, JQuery, React 8, Bootstrap, ADO.NET and AJAX.
- Performed conversion of existing classic ASP web applications into ASP.NET, for various short-term contract projects, utilizing C#.
- Managed and maintained Kubernetes clusters, ensuring high availability, fault tolerance, and optimal performance
- Used different React 8 validator class like touched, untouched valid, invalid etc. to validate form.
- Develop the **UI** component architecture for developer framework using **React, HTML5, CSS3 and Bootstrap.**
- Migrated pages in benefits election website to MVC.NET from ASP Classic code for conversion project.
- Developed WCF Services to expose useful functionality to web users through SOAP, describing them using WSDL, registering them using UDDI for easy availability to potential users and consuming them.
- Created WCF, Restful Services and used different bindings to make it available to different types of clients.
- Built **Single Page Applications (SPA), Responsive Web Design (RWD)** UI, Rich Restful Service Applications, and HTML Wireframes using HTML5 Grid Structures/Layouts, CSS3 Media Queries, Ajax, React JS and Bootstrap
- Create the application in .NET framework, .NET core and implement logic using C# and OOPS concepts.
- The web GUI was built using HTML, DHTML, Web Forms classes and AJAX control for providing a consistent look and their individual states persisted across sessions, thus saving individual preferences and providing a smooth navigation experience.
- Implemented Kubernetes autoscaling and integrated with monitoring tools like Azure Monitor and Application Insights to track performance and optimize resource allocation
- Used ASP.NET MVC5 applications using MVC5 with Razor View Engine. Created the models, views and controllers using ASP.NET MVC5, C#.NET.
- Created Business Logic Layer & Data Access Layers to implement the MVC architecture. Implementation of client-side validations using ASP.NET MVC Validation.
- Developed Web Services and WCF services common for various applications using .NET Framework. Configured various Web Applications on Internet Information Server (IIS).
- Built restful web services using NoSQL database and implemented the front-end using jQuery and React controllers, directives, and service.
- Used Server-Side Validation Controls and Client-Side Validations (using JavaScript) for handling the form inputs.
- Created SSIS DTS Packages to import data from Flat Files into SQL Server Database. Generated various claim related reports from SQL Server Database using Crystal Reports Tool and Telerik reporting.
- Developed major website and services by including Mongo DB as backend software.
- Involved in Debugging and Supporting the application and Performed Unit Testing (using N-Unit).
- Developed and maintained RESTful APIs using .NET 6 and .NET 8, implementing clean architecture and modern design principles to support scalable enterprise solutions.
- Engineered data-driven applications with Azure SQL, optimizing database performance using stored procedures, indexing, and query tuning techniques.
- Built and deployed microservices-based architectures in .NET, ensuring modular development, improved fault isolation, and CI/CD readiness.

Environment: .Net Framework, ASP.NET MVC5, IIS, C#.Net, .Net Core, Visual Studio, Web API, MongoDB, WCF, Entity Frame Work Razor, LINQ, Git, AJAX, React 8, CSS, RWD, Entity Framework, Typescript, JavaScript, Bootstrap, JQuery, ADO.NET, Agile Methodology.

Client: SunTrust Bank, Mysore, India

Oct 2014 – Sep 2017

Role: Senior .Net Developer

Responsibilities:

- Worked with Product Manager to hash out requirements and helped bridge the gap between business requirements and

technical implementation.

- Developed User Controls, used .NET web controls and improved the performance of the application by configuring the caching.
- Used C#.NET to develop code for business and repository layer.
- Used Model View Controller (MVC) architectural Design patterns for the development of the product.
- Designed the application as a three-tier application with UI in the presentation layer, Business logic in the middle layer and Database activity in the third layer.
- Deployment of Classic ASP and MVC .Net Applications using different application pools on web server as a single Intranet Application.
- Worked with Web API for building Restful applications on the .Net Framework.
- Created Views and Partial Views – UI and middle tier for various modules using C#, MVC (Razor View Engine), AJAX, JQuery, HTML5, CSS.
- Used technologies provided by the .NET framework including ASP.NET, Entity framework, Web Services using SOA and data manipulation using XML. Design of multiple web APIs.
- Involved in coding member validation business functionality using WCF.
- WCF to implement the various services such as the QA Services.
- Windows presentation Foundation (WPF) is used for building applications for rendering user interfaces in windows-based applications.
- Designed and development of Win Forms using C#, Java Script for the user interface using the Code behind Class technique.
- Implemented ADO.Net data access techniques i.e. SQL Connection Objects, SQL Command Objects, Data Set Objects, Data Reader Objects and Data Adapter Objects using Data Grid and Data List in ADO.Net.
- Used LINQ to aggregate data from repository layers.
- Practiced Agile Methodology in order to review progress of project in monthly sprints.
- Created Stored Procedures PL/SQL statements, Functions to manipulate the databases.
- Worked with all phases of SDLC in the Waterfall model and Agile (SCRUM) methodologies.
- Utilized Visual Studio .NET and GitHub for collaborative development, version control, and source code management in Agile environments.
- Automated build and deployment pipelines using GitHub Actions integrated with Azure DevOps, improving release speed and quality.
- Employed Swagger/OpenAPI to design, document, and test APIs, enhancing developer experience and client integration workflows.
- Managed tasks, sprints, and issue tracking in Jira, ensuring seamless collaboration between cross-functional teams.
- Deployed and managed applications on the Azure Cloud platform, leveraging services like App Service, API Management, and Azure Monitor for scalability, security, and observability.

Environment: ASP.NET 4.5, C#, Web Services, WCF, WPF, MVC 5/4, LINQ, HTML5, CSS3, TSQL, Visual Studio 2013/2012, RESTFUL, Entity Framework, AJAX, TFS, SSIS, SSRS, SOA, React, Agile (Scrum), XML, XSLT, SharePoint Server, SQL Server 2012 R2 and Windows.

Client: AmFam Insurance, Mysore, India

Jun 2012 – Sep 2014

Role: .Net Developer

Responsibilities:

- Involved in Requirement Gathering, Analysis, Design and Development.
- Developed various ASP.NET pages for retrieving the user information.
- Incorporated C# .NET in Business Logic Layer.
- Used ASP.Net validation control for the server-side validation.
- Developed Business Logic components in middle tier using C#. Wrote classes to implement Business rules and algorithms.
- Used AJAX Controls to improve performance and features of the application.

- Used ASP .NET validation controls for validating the input data.
- Developed the Data Access layer of the component, which uses ADO .NET objects.
- Used features like custom paging on data grids for enhancing the performance.
- Wrote SQL queries and Stored Procedures using MS SQL Server for data access.
- Implemented Role Based security to control user access to portal.
- Developed User Controls and Inherited Controls for easy maintenance and performance.
- Consumed Web Service for user information validation.
- Used Web Services for communicating with other application and components.
- Defined a template for an entire application consisting of many forms using Master Pages.
- Involved in testing, packaging and deployment of the product.

Environment: Visual Studio .NET, C# .NET, ASP.NET, ADO.NET, IIS, AJAX, SQL Server.

EDUCATIONAL QUALIFICATION:

University: - Vinayaka Missions University

Location: - Salem, India

Year: - 2008 – 2012

Course: - Bachelor of Engineering – Computer Science

CERTIFICATION:

Certification Number: - AZ-900

Certification Name: - Microsoft Certified: Azure Fundamentals

Year: - 2021

Certification Number: - 70-480

Certification Name: - Microsoft Certified: Programming in HTML5 with JavaScript and CSS3

Year: - 2013
